Subject: SI and H Experimentation, 16 June 1953

On 16 June 1953, Tuesday, [redacted] and [redacted] engaged in SI and H experimentation and research with the following individuals as subjects: [redacted] and [redacted]

A

In view of the fact that these subjects had worked for a considerable period of time and had reached a levelling off stage in which it appears that their interest is no longer as strong as it had been at the start of the work, it was decided to show them the various movies taken and have a discussion on the film. Accordingly, the film was shown and work was commented upon by [redacted]

At the conclusion of the movies, a straight induction test was run on all hands followed by simple PH carried on by the various operators present. In view of the fact that there were present six subjects and four operators, this work was kept quite simple and was carried out primarily to sustain interest. No advance work was undertaken and the PH were of a standard variety with nothing complex attempted.

The work was concluded at 9:05 PM.
